

MANAGED FUTURES – FOREX - CFD'S

Presentation of TrendCycles

TrendCycles.com GmbH is a broker with offices in Zug and Avegno, Switzerland. The foundation of TrendCycles goes back to 1990, with the individual company "Weill Trading" incorporated. In 1993, a conversion into Weill Trading GmbH, a joint-capital company followed with the incorporation of the head office in Zug. In February 2001, the company's name was changed to TrendCycles.com in accordance with its own internet domain. The company founder and CEO, Frederic Weill, holds 90 % of the original capital. He possesses a solid bank and brokerage background with over 25 years of experience in the industry.

Activity Range

TrendCycles specializes in mathematical system trading on currencies and indices. All investments are placed exclusively in top volume markets with 24 hour trading desks.

The 3 Pillar Concept

1. the trading system

Our trend analyzing system's calculations are based on over 30 years of historical data. The generated signals are in accordance with development of the market prices:

- buy and sell points
- profit optimizing
- risk protection

2. profit- / loss management (trading key)

The Trading Key optimizes profit potential while minimizing risk and is assimilated to every single investment instrument. In consideration of the actual capital basis, the trading key calculates the ideal number of contracts to be traded for each market.

3. investment horizon

To ensure well-balanced performance, an investment duration of a minimum of 3 years is recommended. The longer an investment is within TrendCycles - system trading, the more exponential the expecting capital growth becomes, because of the compounded interest effect. Contrary to most other long term investments, the liquidity with TrendCycles' managed accounts is absolutely guaranteed because the client can rearrange his accounts at any time without prior notice.

TrendCycles System Trading Performance

The performance data show the average capital growth p.a. and is a net result. Please notice: Past performance is not necessarily indicative for future results.

In many countries, trading profits are not subject to income taxes.

TrendCycles Daily Data System (Forex – Gold - Stock Index) :

NLV US\$ 50'000.00 August 2000
NLV US\$ 847'709.51 30th Apr 2012 **27.46 % average net performance p.a. over 141 months**

availability of the assets	at any time
account charges	none
management fees	none
incentive fee	20 % of the monthly net profit

Client's Funds Safety and Transparency

We set a high value on discretion and the safety of our clients' funds. TrendCycles co-operates exclusively with renowned brokers. Each client maintains a separate account registered in his name with the account carrying broker. Joint- and corporate accounts are available as well. TrendCycles does not accept any funds.

Account Opening Administration

The online account opening procedure with the account carrying broker is very easy. To prove identity, all clients are invited to send a copy of their passport by e-mail or fax.

Administration TrendCycles

Limited Power of Attorney: allows for the supervision and trading of the client's account. This power of attorney does not allow for the withdrawal of funds by TrendCycles.

Managed Account Agreement: approves the incentive fee (20 % of the monthly net profit) for TrendCycles. The incentive fee is based on net trading profits, calculated month end to month end, including open position valuations (net liquidation value NLV).

Strategic Success

The daily news about the economy and politics, reports of business outlook, statistics, presentation of company results etc. become interpreted by institutional and private investors and cited as decision factors for investments. With this immense flood of information it easily becomes forgotten that the price and its development is the only truth at the markets. The success of TrendCycles is based on consequent mathematic trading, without the influence of information, opinions and emotions.

No Dive into Cold Water

As a TrendCycles' client you won't dive into cold water, nevertheless this activity is one passion of TrendCycles' CEO, Frederic Weill. In 1998 the banker crowned his sports carrier with a spectacular, Guinness world record dive from a helicopter flying 26 meters in the air. TrendCycles supports the World High Diving Federation with its sport sponsoring program, in order to further the development of cliff-diving.

Perspectives

The financial situation of the social institutions have become more and more out of equilibrium; this has been due to several different factors: the increasing obsolescence of the population, mismanagement, decreasing birth rates etc. The financial return flow, available after retirement will by far not be enough to maintain one's accustomed standard of life. Therefore, one must develop a private formation of assets, not only as pension precaution, but as a high priority.

Performance Comparison

comparison of capital growth including the compound interest (excluding rising prices and taxes)

Initial Capital 50'000	Yield*	Capital after 10 Years	Capital after 20 Years
savings account	3 %	67'196	90'306
bonds	4.5 %	77'648	120'586
real estate / equity fund	7.5 %	90'809	162'626
TrendCycles	27.46 %	565'860	6'403'955

* The yield percentages are estimations, based on long term data available.

Tax Burden

Incomes from savings accounts, bonds, funds etc. are subject of income taxes. This tax burden diminish the performance substantially. The capital profits with TrendCycles managed accounts are free of income taxes in many countries of the world.

Strategic Flexible Fortune Formation

The performance comparison shows the immense difference of the long term capital growth between TrendCycles individual managed accounts and traditional investments. The estimated 27.46 % capital growth per annum is based on historically obtained performance, but is not necessarily indicative for future results.

Strategy

TrendCycles has reached long term over average results with its mathematical trend analyzing system. Our clients are thus always positioned at the market in the respective trend cycles and profits can be generated by rising as well as by decreasing prices.

Flexibility

Although it is recommended an account be kept as a long-term investment, all TrendCycles' clients have control over their accounts at all times. Without notice, a personal account can be closed, withdrawals can be made or further assets can be added.

Fortune Formation

TrendCycles does not charge any fees and commissions (see details on page 2) and the account carrying with the broker is free of charge as well. Therefore TrendCycles does not find itself in the conflict of interest, being obliged to generate trading volume for self financing. Since our remuneration is success-referred, it is our only maxim to develop and increase your fortune.
